

ACTIVITY

User Registration and Login

Instructions

Use your previous MVC application activity in C# and **use Identity** to add the following functionalities to the application:

1. User registration for application users
2. Login page to log on to the system
3. Restrict All CRUD functions for Suppliers and Products to be accessible to authenticated users, ensuring that pages requiring authentication are restricted from anonymous users
4. Ensure that you make links available for each of the CRUD functions for both Supplier and Product **for anonymous users**
5. Configure Identity so that accessing restricted pages automatically redirects the user to the login page

Instructions

Use your previous MVC application activity in C# and **use Identity** to add the following functionalities to the application:

6. Modify the layout of the web app and ensure that you make links available to access the registration and login pages
7. Implement the layout view so that the layout displays appropriate content depending on whether a user is authenticated or not. Make links for Registration and Login available for anonymous users, and Log-out for authenticated users
8. Implement a log-out function for authenticated users
9. Make modifications to your previously created project named [Last name] – ENTPROG-[Section] (i.e. Sy – ENTPROG-OTIS1)
10. Compress the updated solution as a .zip file (Not .rar or other compression) for submission to the drop box.

Important Reminders

- You MUST build the user registration and login using Microsoft's Identity
- Make use of the standard Identity User table
- Please take note that the database is already available in the online database server
- Review the User Registration and Login Mastery Rubric to understand how you will be graded
