

### Arrays Assignment:

Instructions: For this week's assignment you will be using Arrays. Two members of a gym are competing to see who lost the most weight in the first 5 months of the year. Write a program to create two separate arrays for the two members. The program should ask for member name as well as the weight that each member lost each month.

Based on the input, you will output a text chart to show the name of the member, first five months of the calendar year, weight lost for each of those months and total weight lost.

The program should look like the sample below. Remember, anything after '>' is a user input.

#### Sample:

```
Enter the name of the first member?
>Bob
Enter the name of the second member?
>Jack
How many pounds did Bob lose in January?
>3
How much many pounds did Jack lose in January?
>2
How much many pounds did Bob lose in February?
>1
How much many pounds did Jack lose in February?
>2
How much many pounds did Bob lose in March?
>0
How much many pounds did Jack lose in March?
>0
How much many pounds did Bob lose in April?
>0
How much many pounds did Jack lose in April?
>1
How much many pounds did Bob lose in May?
>4
How much many pounds did Jack lose in May?
>2
```

#### Total Weight Lost Chart

	Jan	Feb	March	April	May
Bob	3	1	0	0	4
Jack	2	2		0	1

Bob lost a total weight of: 8 lbs

Jack lost a total weight of: 7 lbs
