

ISM 3232 – Travis – Fall 2019 – Lab VI

You are to **MODIFY** the Visual C# – Lab V project to add the following features:

- See Canvas for the due date of this final Lab
- Replace the two buttons utilized in the previous lab with the menu system shown above. The functionality associated with the Save button should be assigned to the Save menu item in the File menu. And, the Exit button's functionality should be assigned to the Exit menu item in the File menu.
- Change the name of Form1 to MainForm. Follow the procedure described on p. 625-626 in your textbook to successfully accomplish this renaming of the form and its associated file. (The new filename will be, thus, MainForm.cs.)
- Add a second form to this project and name this second form AboutForm. Follow the procedure described on p. 626-627 in your textbook to do this. The design of this second form is shown above. This form is to be displayed as a modal form (see line 48 in the sample program code on p. 597 in the textbook for an example of displaying a modal form) whenever the user chooses the About menu item in the Help menu on the MainForm form. When the Close button on the AboutForm form is clicked, that form should close.
- For the menu system, include the Access Keys and Shortcut Keys shown in the screen shots above. (See p. 736 in the textbook for how to set Shortcut Keys for menu items.)
